

HOA-based access control for the W M+ web app

To: Rick — **From:** Jose — **Date:** 2026-09-14 — **Branch:** `feature/auth-roles`

1. The problem you described

- One Excel file per HOA; nothing shared, nothing auditable.
- Ambiguous initials: "GL" means Governors Landing, not General Ledger.
- Who manages what lives in your head: Debbie → RL (Remington Landing),

Marsha → GL (Governors Landing), Steve → Renaissance.

- Three more HOAs coming in Colorado, soon with Zego and websites.

2. What we built (demo database `hoam26\_auth`, from scratch)

A central **directory**: management company → HOAs (each with an explicit

short code `RL`/`GL`/`Ren`, legal name and license number) → users →

assignments (user × HOA × role). No more initials guessing, no more

brain-RAM: the directory is data now.

Roles: **admin** (everything, that's you), **manager** (their HOAs),

viewer (read-only per HOA). Web sessions expire after 30 minutes idle

(replaces the old password form + 10-minute timer of the Excel).

Every HOA carries its **own** settings, dues rates, fine/letter codes and

GL accounts (copied from a template per HOA), its Zego/website onboarding

flags, and payment rules — including the no-service-fee rule for Colorado.

Writes are sealed to the active HOA: a manager can never touch another

HOA's rows, even by manipulating requests.

3. How it looks (demo screenshots)

4. What we need from you

1. **The directory Excel**: HOA code, legal name, license number, city/state for RL, GL, Ren and the 3 new Colorado HOAs; manager per HOA (Debbie/Marsha/Steve or someone new).

1. Confirm Colorado HOAs must not charge service fees to residents (that's the current default).

1. Demo access (users + passwords) goes separately — ask Jose.

5. What's next

Real seed from your Excel, then business data phases (vendors/checks, payments/APR, year-end close), and merge of this branch after your push to `BravoFrontend`.
