

W M+ Auth — Test Report (Phases 1-5 + Blocking Pilot)

Branch: feature/auth-roles · **Target:** dev backend 3013 + hoamanager26_dev / hoam26_auth **Production untouched** (8888/9997/9998/9999 never exercised). All test data cleaned afterwards. Scripts: backend/scripts/stress-auth.js , stress-t1.js , stress-t2.js (committed, repeatable).

Correctness battery: 5/5

#	Case	Result
1	Login storm 15×	15/15 distinct sessions
2	10 parallel binds, same (User, HOA)	1×200 + 9×409 (after fix; first run: 8×200 — see bug below)
3	Cross-HOA reads (own/foreign mix)	own 200, foreign 403, zero 500
4	Mutation with stale HOA context	403, zero writes verified in DB
5	Cleanup	0 active sessions, 0 STRESS residues

BIND RACE — Eight Winners, Then One

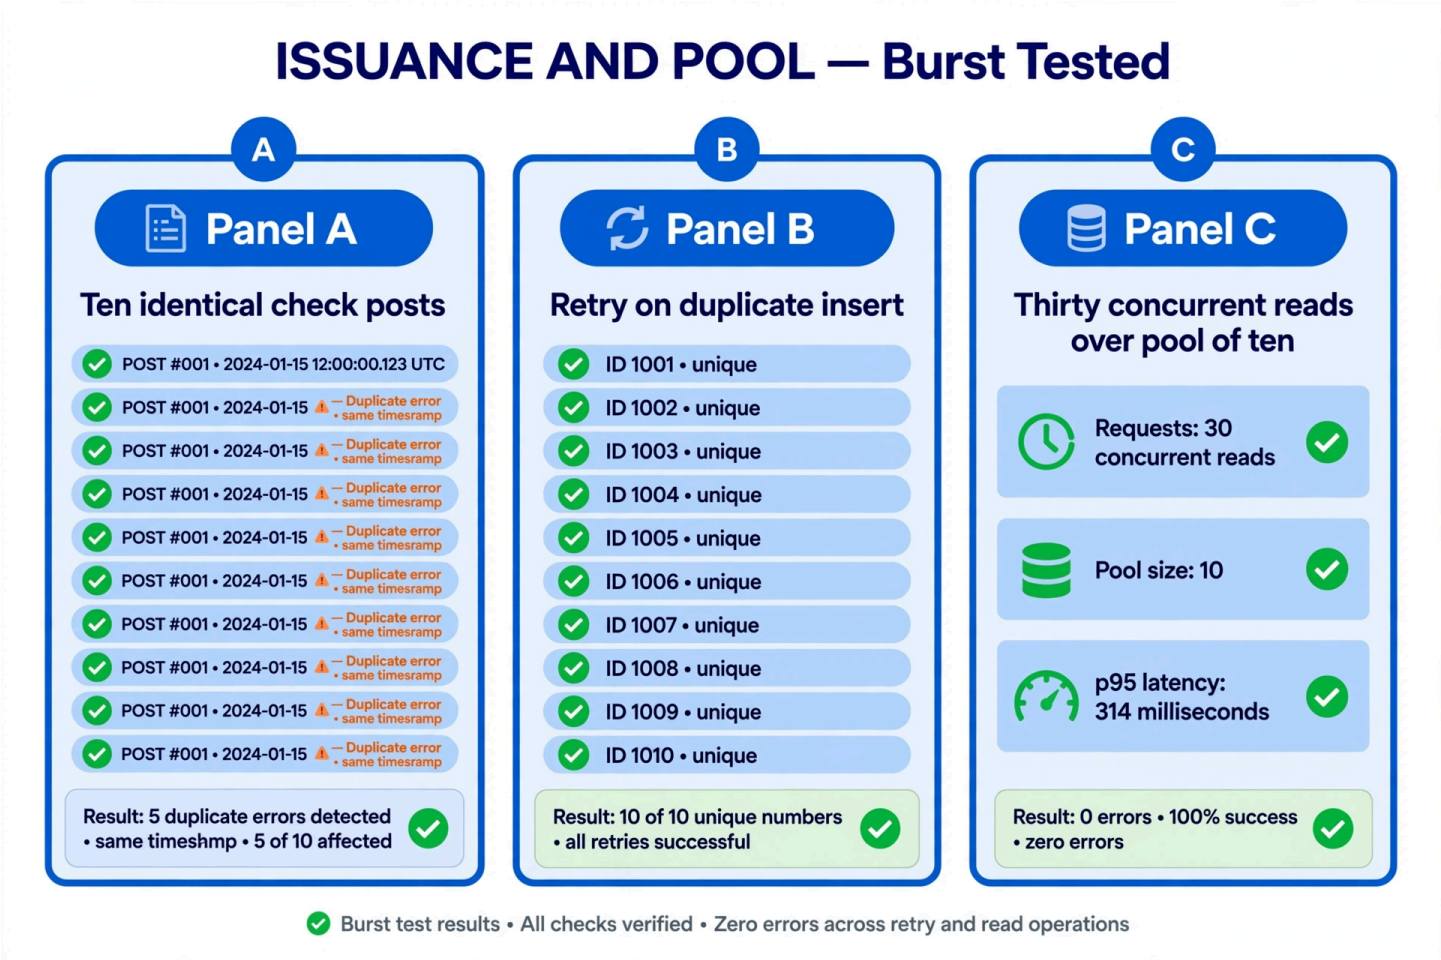

Bug found by test 2: bindActiveHoa check-then-act was non-atomic — 8 parallel binds all won. Fix: transaction + SELECT ... FOR UPDATE on the user row (serializes binds per user). Re-run: exactly one winner. No schema change (history preserved, per Rick).

Issuance burst (T1): 10/10

10 identical POST check-register in one burst: first run 5×201 + 5×500 Duplicate entry (same timestamp tick; the generator's existence check cannot see uncommitted rivals). Fix: rollback + retry on ER_DUP_ENTRY (max 5) → 10/10 201, 10 unique numbers. 15 STRESS rows deleted afterwards, 0 leftovers.

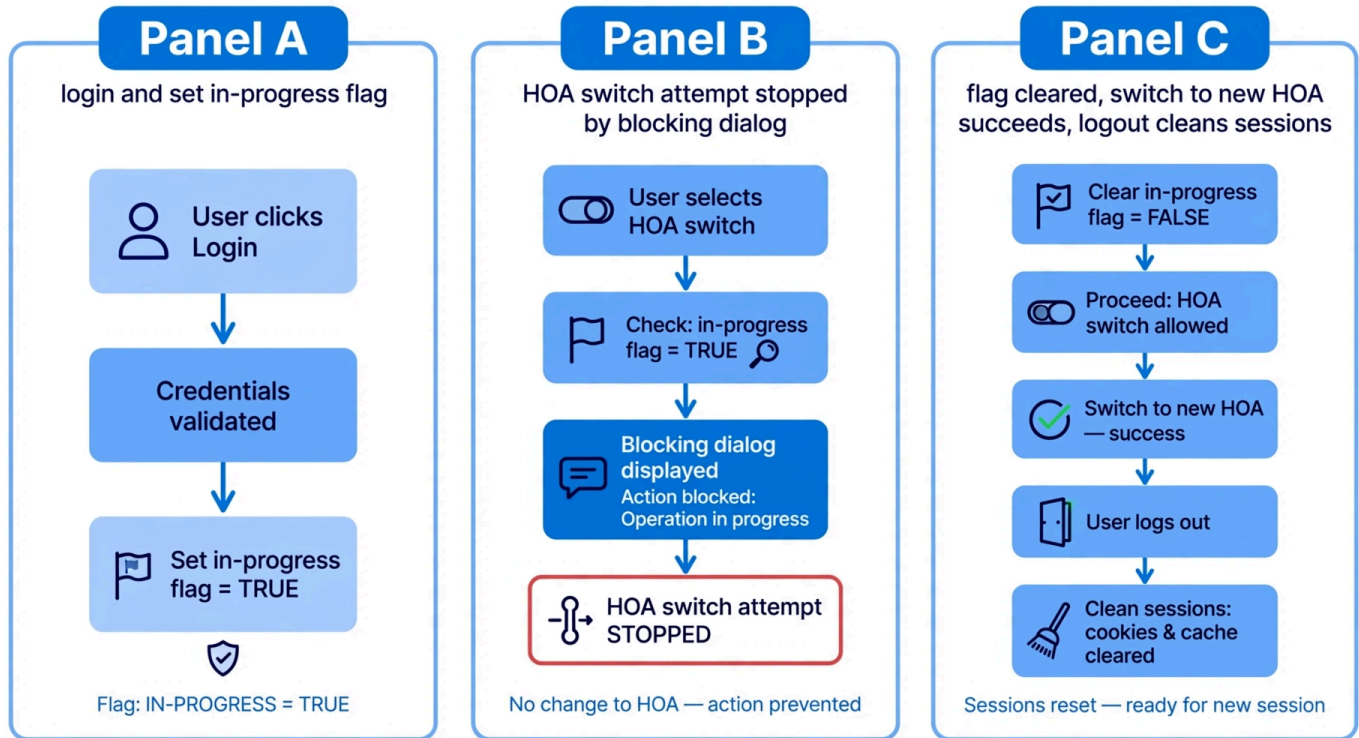

Pool exhaustion (T2): p95 314 ms, 0 errors

30 heavy concurrent reads over a pool of 10: 30x200 — min 173 ms, p50 270 ms, p95 314 ms, max 318 ms. The queue drains cleanly.
